Notes:

- Input functionality can be adapted as follows:
9 inputs may be used as digital inputs. They may be wired, in one group, and set to either npn or pnp via wiring.
In addition, according to appropriate wiring:
 - Inputs 0, 2, and 4 can function as high-speed counters, as part of a Shaft-Encoder, or as normal digital inputs.
 - Inputs 1, 3, and 5 can function as either counter reset, as part of a Shaft-Encoder, or as normal digital inputs.
 - If inputs 0, 2, and 4 are set as high-speed counters (without reset), inputs 1, 3 and 5 can function as normal digital inputs.
- If you configure an input as high-speed, you can use an end-device that comprises push-pull drive type. In this case, the high-speed input voltage ratings for npn/pnp apply.
